# IERG4210 WEB PROGRAMMING AND SECURITY (2015 SPRING) ASSIGNMENT MARKING GUIDELINES

## **REVISION HISTORY**

v4.1	Mar 14	Released Phase 4B Requirements
v4.0	Mar 1	Released Phase 4A Requirements
v3.0	Feb 5	Released Phase 3 Requirements
v2.0	Jan 28	Released Phase 2 Requirements
v1.0	Jan 16	Created this document; Released Phase 1 Requirements

#### GENERAL GUIDELINES

The assignment is designed to let students practice what they have learned in the course. Students must be aware of web application security throughout the web development. The whole assignment is split into 7 phases, leading all the way to a fast, secure, and user-friendly shopping website upon completion. Students can take a real-world website, walmart.com, as a reference. In the assignment, students are expected to understand and apply proper security design principles and programming skills, regardless of what libraries (e.g., jQuery) the students would like to use. The marking checklist in the next page is written in a minimal-viable and result-oriented basis, and thus students can unleash their creativity in building more features. For detailed guidance, students should refer to both tutorial and lecture notes.

# SUBMISSION POLICY

Each student is required to maintain their source code and any resources (e.g., images, css and js files) in an assigned private repository **shop[01-80]** at <u>github.com/ierg4210</u>. While latest changes are always maintained in the *master* branch, students are required to branch out a snapshot titled as **phase[1-7]** from its *master* for each phase. Hence, TAs will pull from the particular branch and only take that into account for inspection. Technical details can be found in Tutorial 2.

Each phase is associated with a <u>firm</u> submission deadline.

- *Early Submission Incentive* For every 48-hour advanced submission in one phase, the deadline for phase 5 or 6 can be extended by 24-hour, and no part thereof is accepted. For instance, submitting 100 hours before the phase 1 deadline will gain an extension of 48 hours for either phase 5 or 6 deadline of your choice.
- Late Submission Penalty Late submission will incur deduction of  $(10\%)^{1/n}$  from your scored points, where *n* is the round-up number of days delayed (e.g. 9 hrs late  $\rightarrow$  10%, 25 hrs late  $\rightarrow$  ~31.6%, 49 hrs late  $\rightarrow$  ~46.5%, and so forth).
- Interim Demonstration Students' submissions will be randomly sampled by TAs for inspection. If a student is found unable to complete 70% of the requirements in any single phase from 1 to 5, s/he is required to see TA, and will be arranged to give an interim demonstration (time and venue TBD). If the student fails to complete 70% of the requirements by the time his/her interim demonstration is given, the case will be escalated to the department for resolution. Students capable of meeting deadlines and 70% of the requirements can safely ignore this policy.
- Final Demonstration Students will sign up for a timeslot to demonstrate their websites to a marker, who will then grade it according to the checklist. The marker will further evaluate the student's understanding with two questions.

# HONESTY IN ACADEMIC WORK

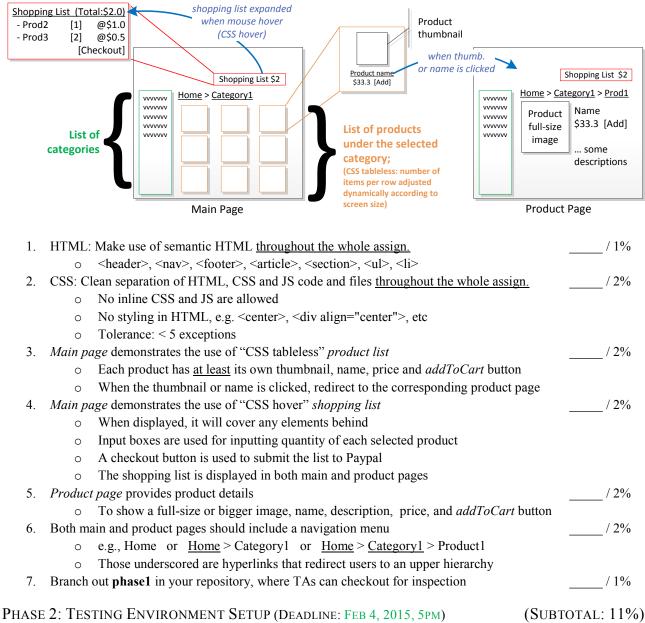

CUHK places very high importance on honesty in academic work submitted by students, and adopts a policy of *zero tolerance* on cheating in examinations and plagiarism. Students are NOT allowed to submit anything that are plagiarised. Therefore, we treat every assignment our students submit as original except for source material explicitly acknowledged. We trust that students acknowledge and are aware of University policy and regulations on honesty in academic work, and of the disciplinary guidelines and procedures applicable to breaches of such policy and regulations, as contained in the website <a href="http://www.cuhk.edu.hk/policy/academichonesty/">http://www.cuhk.edu.hk/policy/academichonesty/</a>.

# IERG4210 WEB PROGRAMMING AND SECURITY (2015 SPRING) ASSIGNMENT MARKING CHECKLIST V3.0

## PHASE 1: LOOK AND FEEL (DEADLINE: JAN 26, 2015, 5PM)

(SUBTOTAL: 12%)

A designer has drafted a layout as follows, which outlines some fundamental features of a shopping website. In this phase, you will create a mock-up by hardcoding the website with dummy categories and products.

In this phase, you are required to setup a local development environment and also a remote deployment environment. Some guidance will be given in tutorial 4.

- 1. Create a web application and server using Node.js
  - Initialize a new node project, and install the following npm packages
- / 1%

- as dependency: express and express-handlebars
- as development dependency: supervisor
- Hosting your server locally

/ 1%

Use supervisor to run your app locally to avoid manual restarting upon code changes

		• Server accessible at http://localnost[:3000] or any port number	
	0	Serve static files using the express.static middleware	/ 2%
		<ul> <li>Static image files accessible through http://localhost[:3000]/images/</li> </ul>	
		<ul> <li>Static JavaScript files accessible through http://localhost[:3000]/lib/</li> </ul>	
		<ul> <li>Static CSS files accessible through http://localhost[:3000]/css/</li> </ul>	
	0	Serve dynamic pages with a <i>server-side</i> JS templating engine	/ 3%
		Based on the simple basic example of ExpressHandlebars (sample code)	
		- Move the common UI code from your two HTML into a main template layout	
		- Hence, core contents of your pages will be combined with the main template	
		The <i>main page</i> accessible through http://localhost[:3000]/	
		The product page accessible through http://localhost[:3000]/product	
2.	Denlov	your code to Amazon Elastic Beanstalk** (EB)	/ 4%
2.	O	Create a EB environment for Node.js (application name: shopXX-ierg4210)	
	0	Deploy your application to the EB environment <sup>#</sup>	
	0	Remotely accessible through the given application URL	
		Branch out <b>phase2</b> in your repository, where TAs can checkout for inspection	
	0

Diragi	- 2 A · D	ACKEND PORTAL AND MANAGEMENT (DEADLINE: FEB 18, 2015, 5PM) (SUBTO	TAT - 00/)
			γal: 8%)
In this j	phase, yo	u will build a backend portal for administrators to manage your products.	
1.	Create	a database with the following structures	/ 1%
1.	O	A table for <i>categories</i>	/ 1/0
	O	Required columns: catid (primary key, unique), name	
		<ul> <li>Data: at least 2 categories of your choice</li> </ul>	
	0	A table for <i>products</i>	
		<ul> <li>Required columns: pid (primary key, unique), catid, name, price, description</li> </ul>	
2	C	Data: at least 2 products for each category  A hard and appropriate to the form of the control of the cont	
2.		a backend management portal for admin	/ 20/
	0	Design several HTML forms to add, change*, and delete a category in DB	/ 2%
		Input field for category's name	/ 50/
	0	Design several HTML forms to add, change*, and delete a product in DB	/ 5%
		<ul> <li>Dropdown menu to choose and change the category (using <select>)</select></li> </ul>	
		<ul> <li>Input field for product's name</li> </ul>	
		<ul> <li>Input field for product's price (supporting 2 decimal places)</li> </ul>	
		<ul> <li>Textarea for product's description</li> </ul>	
		<ul> <li>File field for product's photo</li> </ul>	
		(Format: jpg/gif/png, Size: <=10MB, Name: pid.[jpg gif png])	
		ne original values must be restored back to the inputs before a change (display the photo near	by)
3.	Branch	out <b>phase3a</b> in your repository, where TAs can checkout for inspection	
	45 5		4.60()
		RONTEND PRESENTATION (DEADLINE: FEB 27, 2015, 5PM) (SUBTOTA	
_		u will implement the shopping cart that allows users to shop around your products. This phase	e is
designe	ed to let y	ou practise data presentation and AJAX programming.	
	D 1		
1.	_	te the <i>main page</i> 's contents from DB with Handlebars or ExpressHandlebars	
	0	Populate the <i>category list</i> from DB	/1%
	0	Based on the category picked by user, populate the corresponding <i>product list</i> from DB	/ 3%
		<ul><li>Reflect catid in the URL (i.e., /?catid=[x], or simply /[x])</li></ul>	
		<ul> <li>The corresponding product list is shown upon accessing the new LIRL in a new tab</li> </ul>	1

2.	-	the <i>product page</i> 's contents from DB with Handlebars or ExpressHandlebars	/ 2%
2		Display the details of a product according to its DB record	
3.	_	vaScript, dynamically update <sup>#</sup> the <i>shopping list</i>	/ 10/
	0	When the <i>addToCart</i> button of a product is clicked, add it to the shopping list	/1%
		<ul> <li>Adding the same product twice adds up quantity, do not display two rows of re</li> </ul>	cord
	0	Once a product is added,	/ 10/
		• Users are allowed to update its <i>quantity</i> and delete it with a number input, or	/ 1%
		two buttons for increment and decrement	
		• Store its <i>pid</i> and <i>quantity</i> in the browser's localStorage	/2%
		• Get the <i>name</i> and <i>price</i> over AJAX (with <i>pid</i> as input)	/3%
		<ul> <li>Calculate and display the total amount at the client-side</li> </ul>	/ 1%
	0	Once the page is reloaded, the <i>shopping list</i> is restored	/ 2%
		<ul> <li>Page reloads when users browse another category or visit the product detail page</li> </ul>	ge
		<ul> <li>Populate and retrieve the stored products from the localStorage</li> </ul>	
	#The wh	ole process of shopping list management must be done without a page load	
4.	Branch o	out <b>phase3b</b> in your repository, where TAs can checkout for inspection	
	0	Include a README.md file in your repo and document your application URL	
PHASE	E 4A: Wi	EB APPLICATION SECURITY (DEADLINE: MAR 20, 2015, 5PM) (SUBT	OTAL: 22%)
In this p	ohase, you	will protect your website against many popular web application security threats.	
1.	No XSS	Injection and Parameter Tampering Vulnerabilities in the whole webapp	
	0	[UX Enhancement Only] Proper and vigorous client-side input restrictions for all forms	/ 1%
	0	Proper and vigorous server-side input validations sanitizations and for all forms	/ 2%
		Apply Content Security Policy	/ 2%
		Disable by default all src (including inline) except self's protocol	
		<ul> <li>Hints: CSP Generator</li> </ul>	
	0	Apply context-dependent output sanitizations	/ 2%
		<ul> <li>Apply context-parser-handlebars or express-secure-handlebars (release before)</li> </ul>	
		If you concatenated user inputs without handlebars, apply <u>xss-filters</u> manually	,
2.	No SOL	Injection Vulnerabilities in the whole webapp	/ 2%
	-	Apply prepared SQL statements	
3.		F Vulnerabilities in the whole webapp	/ 2%
5.	0	Apply and validate secret nonces (must be user-specific and random) using <u>csurf</u>	/ 2/0
		Every form and state-changing requests must defend against Traditional and Login CSR	F
4.		mation leaking (e.g., thru global variables) outside scopes of Node.js request handlers	/ 1%
5.		cation for Admin Panel	/ 1/0
3.		Create a user table (or a separate DB with only one user table)	/ 1%
	0	Required columns: userid (primary key), username, password, admin*	/ 170
		Buttle the reast 2 diserts of your enoted	
		<ul> <li>Security: Passwords must be properly salted and hashed before storage</li> </ul>	
		* 0 indicates non-admin, 1 indicates admin	/ 20/
	0	Build an login page at /admin/login that asks for email and password	/ 2%
		<ul> <li>Upon proper validations and authentication, redirect the user to the admin pane</li> </ul>	? <i>l</i>
		Otherwise, prompt for errors (i.e. your email or password is incorrect)	
	0	Maintain an authentication token using <u>express-session</u>	
		<ul> <li>Cookie name: auth; value: a <u>signed</u> session id; property: httpOnly</li> </ul>	/ 1%
		<ul> <li>Cookies persist after browser restart, and last for at most 3 days</li> </ul>	/ 1%
		<ul> <li>No Session Fixation Vulnerabilities (rotate session id upon successful login)</li> </ul>	/ 1%
	0	Validate the authentication token before revealing and executing admin features	/ 3%
		<ul> <li>Create an Express middleware that executes before all protected /admin route</li> </ul>	S
		<ul> <li>Given proper validations, allow access to admin panel and executions of admir</li> </ul>	features
		<ul> <li>Otherwise (e.g. incorrect token), redirect back to the login page</li> </ul>	

	Protected routes refer to all /admin/* and /admin/api/* except those /admin/login
	<ul> <li>Provide a logout feature that void the authentication token</li> </ul>
6.	Branch out <b>phase4a</b> in your repository, where TAs can checkout for inspection
PHASI	4B: NETWORK SECURITY (DEADLINE: MAR 30, 2015, 5PM) (SUBTOTAL: 5%)
In this 1	hase, you will setup the end-to-end HTTPS support to defend against Man-in-the-middle attacks. Instructions and
details	can be found in the <u>sample code repo</u> and tutorial notes.
1.	Apply SSL certificate for store[01-80].ierg4210.org
	o Certificate Application/ 2%
	<ul> <li>Apply a 90-day free certificate from <u>FreeSSL.su</u> (or another CA if you like)</li> </ul>
	<ul> <li>TAs will help authorize your application only if you choose <u>admin@ierg4210.org</u> for domain</li> </ul>
	control validation
	Reminder: the application process can take more than a day, so apply early!!
	<ul> <li>Reminder: keep your secret key secure, or you will need to reapply a new certificate</li> </ul>
	Certificate Installation
	■ Install the issued certificate at Elastic Beanstalk load balancer/ 1%
	■ Enforce the admin panel /admin is always served at, and redirected as needed:/ 2%
	https://store[01-80].ierg4210.org/admin
	(Given your github repo is shopXX, TAs will map storeXX.ierg4210 to your application URL)
PHASE	5: SECURE CHECKOUT FLOW (DEADLINE: TBD) (SUBTOTAL: TBD%)
	a toughest phase, yet the most critical one to escalate your website to a professional level.
1.	More requirements will be released
Рилсі	6: EXTENSIONS (DEADLINE: TBD) (SUBTOTAL: >5%. TBD, BONUS: % MAX)
	whase, you can choose any combinations of the following items to implement. At most _% bonus will be awarded.
m uns j	mase, you can choose any combinations of the following items to implement. At most _/0 bonus will be awarded.
1.	Support multi-level categories for products (should update both frontend and backend)/ 3%
2.	Support pagination / AJAX infinite scroll when browsing products in the main page/ 3%
3.	Using AJAX when browsing categories and products in the main page/ 4%
	<ul> <li>Use <u>location.assign</u> to reflect the state of current view</li> </ul>
	o The corresponding view is shown upon accessing the new URL in a new tab
4.	Apply Search Engine Optimized (or user-friendly) URLs on frontend / 2%
	o Include the name of categories and products into the URLs:
	e.g. /[catid]-[catname]/ for browsing products under the category [catid]
2	e.g. /[catid]-[catname]/[pid]-[pname]/ for browsing product details of [pid]
2.	Support HTML5 Drag-and-drop image upload in the admin panel/ 2%
	o Create and Highlight a dropping zone when a file is being dragged to the zone
2	O Display a thumbnail (i.e. smaller width and height) if the dropped file is an image; reject it otherwise Support AJAX image upload in the backend portal / 3%
3. 4.	Support AJAA image upload in the backend portal  Support automatic image resizing for product images  / 3%
4.	When a large image is uploaded, the image is automatically resized to produce a thumbnail image
	<ul> <li>which a large image is uploaded, the image is automatically resized to produce a thumbhan image</li> <li>In the main page, display thumbhails. In the product description page, display the large image.</li> </ul>
5.	Support Change of Password/ 3%
٥.	Must validate the current password first
	<ul> <li>Take the new passwords twice</li> </ul>
	<ul> <li>Log user out after the password is changed</li> </ul>
6.	Support secure password reset through email/ 6%
	A page that asks for email address for password recovery
	<ul> <li>Only if the email corresponds to an existing user, an email will be generated</li> </ul>
	o In the email, a password recovery hyperlink includes a one-time random nonce
	Password recovery validates the nonce before password generation or allow password change.

7. 8.	<ul> <li>Show the simultaneous logged-in sessions in the admin panel</li> <li>Each session should be identified by an IP and allows logging out other sessions</li> <li>Hints: Use DB to save valid authentication tokens</li> </ul>					
	<ul> <li>Google: <a href="http://code.google.com/apis/accounts/doc">http://code.google.com/apis/accounts/doc</a></li> <li>Facebook: <a href="https://developers.facebook.com/docs/a">https://developers.facebook.com/docs/a</a></li> </ul>					
9. 10.	Setup HTTP Strict Transport Security (HSTS) for your HT Subject to changes upon students' requests and upon releas	TPS pages/ 1%				
	7A: SELF HACKING (DEADLINE: TBD)  More requirements will be released	(Subtotal:%)				
	7B: PEER HACKING (PERIOD: TBD)  More requirements will be released	(SUBTOTAL:%, BONUS:% MAX)				
FINAL	Q&A Random Question 1: Code-related Random Question 2: Conceptual or Code-related	(SUBTOTAL: -75%)%				
SID: _	Random Question 2. Conceptual of Couc-related	TOTAL:/ 100%				
		MARKER RESPONSIBLE:
