IERG4210 WEB PROGRAMMING AND SECURITY (2015 SPRING) ASSIGNMENT MARKING GUIDELINES

REVISION HISTORY

v3.0	Feb 5	Released Phase 3 Requirements
v2.0	Jan 28	Released Phase 2 Requirements

v1.0 Jan 16 Created this document; Released Phase 1 Requirements

GENERAL GUIDELINES

The assignment is designed to let students practice what they have learned in the course. Students must be aware of web application security throughout the web development. The whole assignment is split into 7 phases, leading all the way to a fast, secure, and user-friendly shopping website upon completion. Students can take a real-world website, <u>walmart.com</u>, as a reference. In the assignment, students are expected to <u>understand and apply</u> proper security design principles and programming skills, regardless of what libraries (e.g., jQuery) the students would like to use. The marking checklist in the next page is written in a minimal-viable and result-oriented basis, and thus students can unleash their creativity in building more features. For detailed guidance, students should refer to both tutorial and lecture notes.

SUBMISSION POLICY

Each student is required to maintain their source code and any resources (e.g., images, css and js files) in an assigned private repository **shop[01-80]** at <u>github.com/ierg4210</u>. While latest changes are always maintained in the *master* branch, students are required to branch out a snapshot titled as **phase[1-7]** from its *master* for each phase. Hence, TAs will pull from the particular branch and only take that into account for inspection. Technical details can be found in Tutorial 2.

Each phase is associated with a <u>firm</u> submission deadline.

- Early Submission Incentive For every 48-hour advanced submission in one phase, the deadline for phase 5 or 6 can be extended by 24-hour, and no part thereof is accepted. For instance, submitting 100 hours before the phase 1 deadline will gain an extension of 48 hours for either phase 5 or 6 deadline of your choice.
- Late Submission Penalty Late submission will incur deduction of $(10\%)^{1/n}$ from your scored points, where *n* is the round-up number of days delayed (e.g. 9 hrs late \rightarrow 10%, 25 hrs late \rightarrow ~31.6%, 49 hrs late \rightarrow ~46.5%, and so forth).
- Interim Demonstration Students' submissions will be randomly sampled by TAs for inspection. If a student is found unable to complete 70% of the requirements in any single phase from 1 to 5, s/he is required to see TA, and will be arranged to give an interim demonstration (time and venue TBD). If the student fails to complete 70% of the requirements by the time his/her interim demonstration is given, the case will be escalated to the department for resolution. Students capable of meeting deadlines and 70% of the requirements can safely ignore this policy.
- Final Demonstration Students will sign up for a timeslot to demonstrate their websites to a marker, who will then grade it according to the checklist. The marker will further evaluate the student's understanding with two questions.

HONESTY IN ACADEMIC WORK

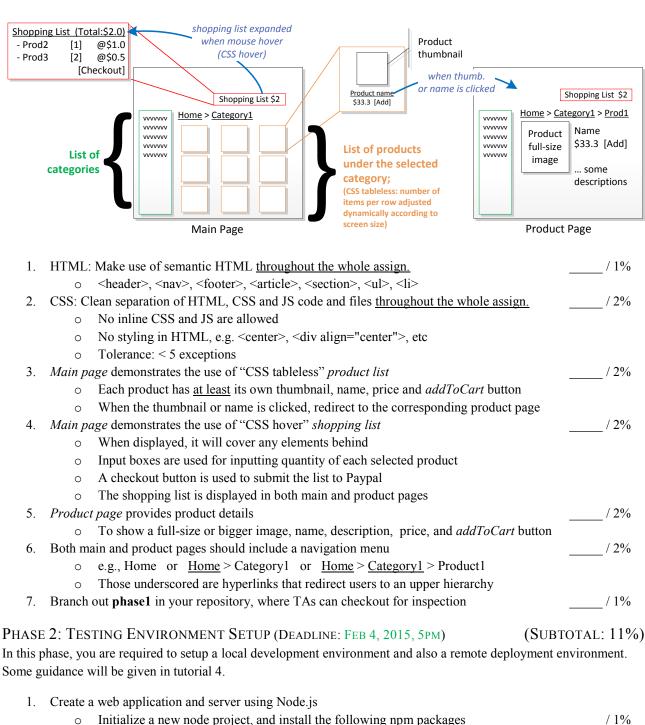

CUHK places very high importance on honesty in academic work submitted by students, and adopts a policy of *zero tolerance* on cheating in examinations and plagiarism. Students are NOT allowed to submit anything that are plagiarised. Therefore, we treat every assignment our students submit as original except for source material explicitly acknowledged. We trust that students acknowledge and are aware of University policy and regulations on honesty in academic work, and of the disciplinary guidelines and procedures applicable to breaches of such policy and regulations, as contained in the website http://www.cuhk.edu.hk/policy/academichonesty/.

IERG4210 WEB PROGRAMMING AND SECURITY (2015 SPRING) ASSIGNMENT MARKING CHECKLIST V3.0

PHASE 1: LOOK AND FEEL (DEADLINE: JAN 26, 2015, 5PM)

(SUBTOTAL: 12%)

A designer has drafted a layout as follows, which outlines some fundamental features of a shopping website. In this phase, you will create a mock-up by hardcoding the website with dummy categories and products.

- Initialize a new node project, and install the following npm packages
 - as dependency: express and express-handlebars
 - as development dependency: supervisor
- Hosting your server locally

/ 1%

Use supervisor to run your app locally to avoid manual restarting upon code changes

 Server accessible at http://localhost[:3000] or any port number Serve static files using the express.static middleware Static image files accessible through Static JavaScript files accessible through Static CSS files accessible through http://localhost[:3000]/lib/ Static CSS files accessible through http://localhost[:3000]/css/ Serve dynamic pages with a server-side JS templating engine Based on the simple basic example of ExpressHandlebars (sample code) 	/ 2%
- Move the common UI code from your two HTML into a main template I - Hence, core contents of your pages will be combined with the main temp The main page accessible through http://localhost[:3000]/ The product page accessible through http://localhost[:3000]/product Deploy your code to Amazon Elastic Beanstalk** (EB) Create a EB environment for Node.js (application name: shopXX-ierg4210) Deploy your application to the EB environment# Remotely accessible through the given application URL	-
o Branch out phase2 in your repository, where TAs can checkout for inspection	
gitignore configured to exclude committing any installed node and virtualent	packages
** <i>This will incur charges:</i> (1) Apply the free US\$100 AWS credit code, to be distributed by TA	
(2) After the first deployment, configure to use single instance to save cost during development	
(3) Terminate any unused resources (during/after this course). You're responsible for charges beyon	ond your free quota
PHASE 3A: BACKEND PORTAL AND MANAGEMENT (DEADLINE: FEB 18, 2015, 5PM) (S In this phase, you will build a backend portal for administrators to manage your products.	ubtotal: 8%)
1. Create a database with the following structures	/ 1%
 A table for categories 	
 Required columns: catid (primary key, unique), name 	
Data: at least 2 categories of your choice	
 A table for products Required columns: pid (primary key, unique), catid, name, price, description 	274
 Data: at least 2 products for each category 	m
2. Create a backend management portal for admin	
 Design several HTML forms to add, change*, and delete a category in DB 	/ 2%
 Input field for category's name 	
 Design several HTML forms to add, change*, and delete a product in DB 	/ 5%
 Dropdown menu to choose and change the category (using <select>)</select> 	
 Input field for product's name Input field for product's price (supporting 2 decimal places) 	
Textarea for product's description	
 File field for product's photo 	
(Format: jpg/gif/png, Size: <=10MB, Name: pid.[jpg gif png])	
* The original values must be restored back to the inputs before a change (display the pho	to nearby)
3. Branch out phase3a in your repository, where TAs can checkout for inspection	
PHASE 3B: FRONTEND PRESENTATION (DEADLINE: FEB 27, 2015, 5PM) (SU	BTOTAL: 16%)
In this phase, you will implement the shopping cart that allows users to shop around your products. The designed to let you practise data presentation and AJAX programming.	,
1. Populate the <i>main page</i> 's contents from DB with Handlebars or ExpressHandlebars	
o Populate the <i>category list</i> from DB	/ 1%
 Based on the category picked by user, populate the corresponding <i>product list</i> from Reflect catid in the URL (i.e., /?catid=[x], or simply /[x]) 	DB/ 3%
 The corresponding product list is shown upon accessing the new URL in a 	new tab

2.	Populate the product page's contents from DB with Handlebars or ExpressHandlebars	/ 2%
	o Display the details of a product according to its DB record	
3.	Using JavaScript, dynamically update [#] the <i>shopping list</i>	
	• When the <i>addToCart</i> button of a product is clicked, add it to the shopping list	/ 1%
	 Adding the same product twice adds up quantity, do not display two rows of re 	ecord
	 Once a product is added, 	
	 Users are allowed to update its quantity and delete it with a number input, or 	/ 1%
	two buttons for increment and decrement	
	Store its pid and quantity in the browser's localStorage	/ 2%
	Get the <i>name</i> and <i>price</i> over AJAX (with <i>pid</i> as input)	/ 3%
	 Calculate and display the total amount at the client-side 	/ 1%
	 Once the page is reloaded, the <i>shopping list</i> is restored 	/ 2%
	 Page reloads when users browse another category or visit the product detail page. 	
	 Populate and retrieve the stored products from the localStorage 	50
	*The whole process of <i>shopping list</i> management must be done without a page load	
4.	Branch out phase3b in your repository, where TAs can checkout for inspection	
4.		
	o Include a README.md file in your repo and document your application URL	
		TAL: TBD%)
In this p	phase, you will protect your website against many popular web application security threats.	
1	No VCC Initiation and Demonstra Townships W. Insushilitian in the order of	
1.	No XSS Injection and Parameter Tampering Vulnerabilities in the whole webapp	/ 10/
	o [UX Enhancement Only] Proper and vigorous client-side input restrictions for all forms	
	o Proper and vigorous server-side input validations sanitizations and for all forms	/2%
	 Proper and vigorous context-dependent output sanitizations using TBD 	/ 2%
